

USIDNet Repository Informed Consent (existing cell line)

I hereby consent to the submission of a previously collected blood cell, tissue biopsy or DNA sample from me or my child to the **USIDNet DNA and Cell Repository**, a research resource supported by the National Institutes of Health. The Repository collects, stores, and distributes cell cultures and DNA samples from people with all forms of primary immunodeficiency disorder, from unaffected family members and from other healthy people. The samples in the Repository will be maintained by and at Coriell Cell Repositories in Camden, NJ.

I understand that the cells, cell lines or DNA will be added to the Repository's collection. The purpose of this collection is to make specimens readily available for use in research and teaching. Since the Primary Immunodeficiency (PI) diseases are rare, donation of this sample to the Repository may give a broader group of scientists access to rare research materials from patients and families affected with Primary Immunodeficiency. It is hoped that wider scientific access and study may help to improve understanding of these diseases and to develop new diagnostic tests and new treatments for these and other disorders.

The Repository will take strong measures to protect the privacy of my child or me. All identifying information will be removed from the cell or DNA specimen by my doctor before the sample is submitted to the Repository. The specimen will be given a unique code number for future identification and the record maintained by the Repository will only contain general information such as age, sex, state of residence, diagnosis and molecular defect (if known). The USIDNet Repository will not have my name, address or other specific identifying information to link the sample specifically to me or my child and therefore it is very unlikely that anyone would be able to determine in the future that the sample was taken from me or my child.

Because the purpose of this Repository is to provide the research community with cell and DNA samples from patients with rare defects in their immune systems while at the same time protecting the privacy of those donors, the Repository will not be able report back to me any information about research findings that may be made on my specific sample. The link between the identifying number given to the sample and my name will be broken. However I do understand that a potential link may remain between the sample and me if the USIDNet Repository keeps a record of the name and address of the physician who submitted this sample. In this event the USIDNet Repository could

contact my doctor and in this way potentially transmit back to me research results or a request for me to participate in additional studies – although the Repository would still not have my identity in its records and would not have enough information to contact me without the assistance of my doctor. If my doctor is unavailable or is unable to contact me for some reason, I understand that no contact or exchange of information between the Repository and me concerning my sample will be possible – nor will it be possible for me to request removal of my sample from the collection once it has been de-identified and submitted.

I would () would not () like to have my doctor's name remain linked to my coded sample in the Repository's records.

I would () would not () like to be contacted by my doctor in the future about the results of research studies performed on my sample or with possible opportunities for me to join additional research studies.

There will be no direct benefit or payment to me or my child for participating, but the sample may benefit the community at large or some particular group. The sample will stay in the Repository indefinitely and I will not be able to withdraw it sometime in the future.

My donation to the Repository is voluntary, and if I choose not to participate there will be no penalty or loss of benefits to which I or my child is entitled.

(Signature) _____

(Relationship) _____ (Date) _____

(Submitter) _____

(Submitter Address) _____

If I have any questions relating to submission this specimen, I should contact (name) _____ (phone) _____, who submitted the specimen to the Repository.

If I have any questions about the Repository, I should contact Dr. Christine Beiswanger, Coriell Institute for Medical Research, 403 Haddon Avenue, Camden, New Jersey 08103. (Telephone: 800-752-3805).

If I have questions about my rights as a research subject I should call _____ (representative of submitter's IRB).

To contact the CORIELL CELL REPOSITORIES:

Write: 403 Haddon Avenue; Camden, New Jersey 08103; USA

Call: 800-752-3805 in the United States; 856-757-4848 from other countries
Fax: 856-757-9737
e-mail: ccr@coriell.org

This consent document was approved for use by the Coriell Institutional Review Board on May 20, 2004.
