Certificate of Analysis — ***NIGMS Human Genetic Cell Repository***

Human induced Pluripotent Stem Cell (iPSC) Line: **GM27173*B**

Diagnosis	Isogenic Control, Long QT Syndrome 2
Parental cell line mutation	KCNH2; c.1264 G>A (p.A422T) (mutation corrected with CRISPR/Cas9); c.1278C>G
Wild type cell line, cell line ID	iPSC, GM25305
Sex	Female
Reprogramming method	Retroviral vectors containing OCT4, SOX2, KLF4, and MYC
Passage number at freeze	P55
Culture media	mTeSR1™
Feeder or Matrix substrate	Matrigel®
Recommended passage method and split ratio	Versene; 1:5 every 5-6 days
iPSC line establishment publication(s)	

The following testing specifications have been met for this product lot:

Test Description	Test Method	Test Specification	Result
Post-Thaw Cell Viability	Colony doubling	Colony formation and diameter doubling within 5 days	Pass
Sterility	Growth on agar and broth	Negative	Pass
Mycoplasma	qRT-PCR	Negative	Pass
Alkaline Phosphatase Staining	Cell staining	>80% cells with positive staining	Pass
Identity Match	STR (THO-1, D22S417, D10S526, vWA31, D5S592, and FES/FPS)	Match parental cell line	Pass
Genomic Integration of Episomal Plasmid	Genomic PCR using plasmid specific primers and endogenous FBXO1 control	No plasmid specific sequence amplified using 100 ng gDNA template	N/A
Detection of Sendai Virus Genome and Transgene	qRT-PCR using SEV specific primers	No detection of SEV genome or transgenes	N/A
Surface Antigen Expression of Stem Cell Markers	Immunostaining and flow cytometric detection	>80% expression of SSEA4	Pass
Differentiation Potential	Embryoid body (EB) formation and gene expression	Minimum of 1 gene per germ layer expressed 2 fold or higher	Pass
Cytogenomics	G-banding, Affymetrix Human SNP Array 6.0	46,XX[18].arr(1-22,X)x2	Pass

Post-Thaw Cell Viability

One distribution lot vial of the cell line was thawed and placed in culture. Cultures were observed daily. Colonies were photographed upon first appearance, then 4 days later. Colonies must double in diameter within 5 days. The area for 5 colonies was measured using CellSens software on the Olympus IX50 microscope at 40x magnification. The average area is reported here.

Day	Average area (μm^2)
1	25,428
5	403,118

Colony area increased by 16 fold.

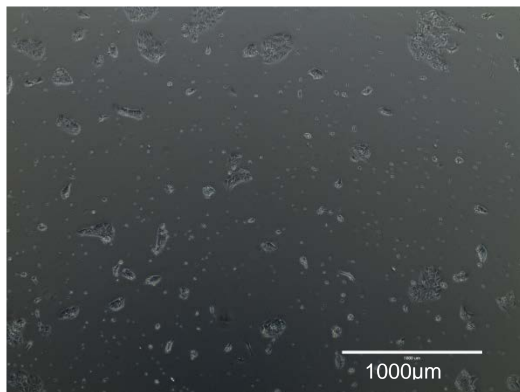

Figure 1A. Colonies post thaw (Day 1)

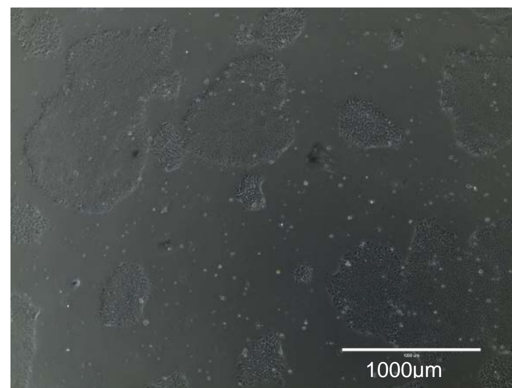

Figure 1B. Colonies 3 days after first observation (Day 5)

Alkaline Phosphatase Staining

Cells were stained using the StemTAG™ Alkaline Phosphatase Staining Kit from CellBiolabs, Inc.

Surface Antigen Expression of Stem Cell Markers

Undifferentiated cells are stained for stage specific embryonic antigen 4 (SSEA4) which is expressed on the surface of undifferentiated human pluripotent stem cells. Cells were analyzed using the MACSQuant Flow Cytometer by Miltyeni Biotec. More than 80% of cells should stain with antibodies specific for SSEA4.

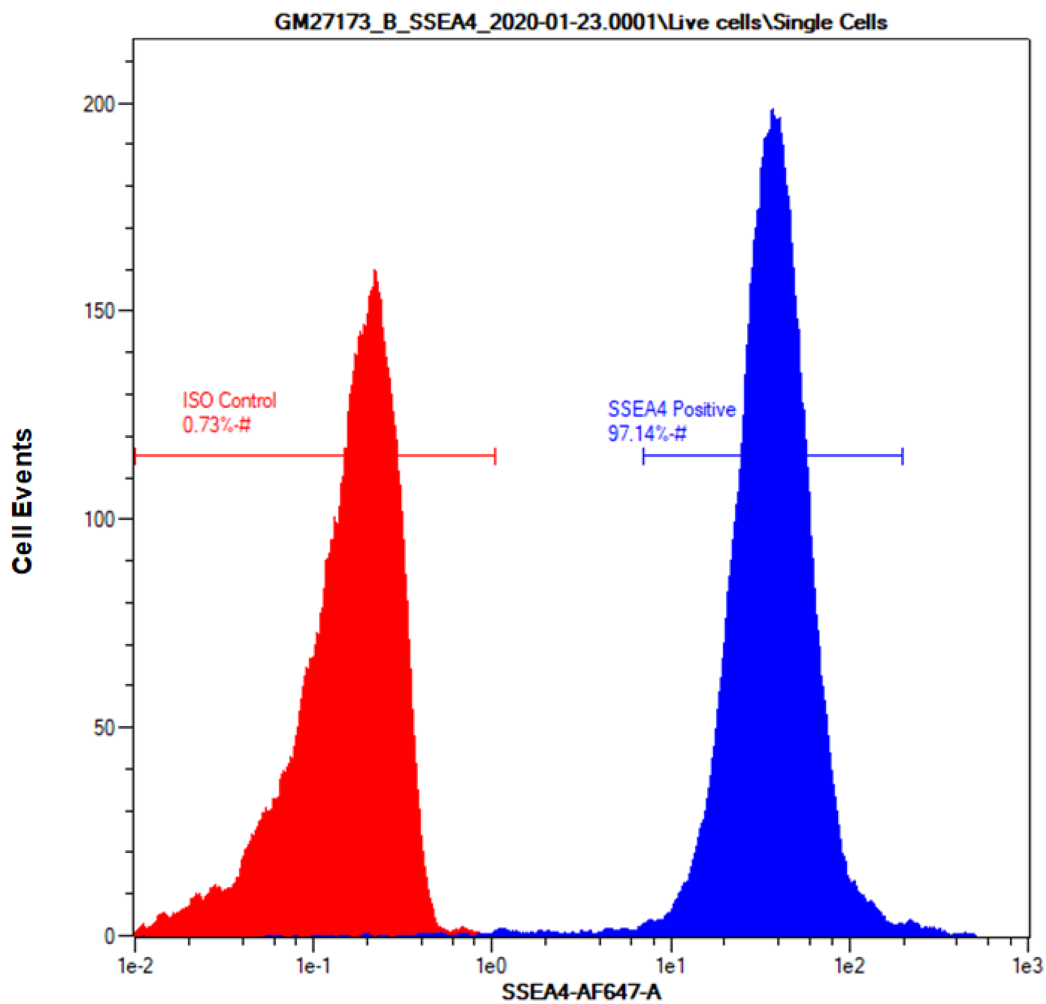

Figure 3. Representative histogram of SSEA4 positive population showing an overlay of isotype stained control (red) and SSEA4 positive population (blue)

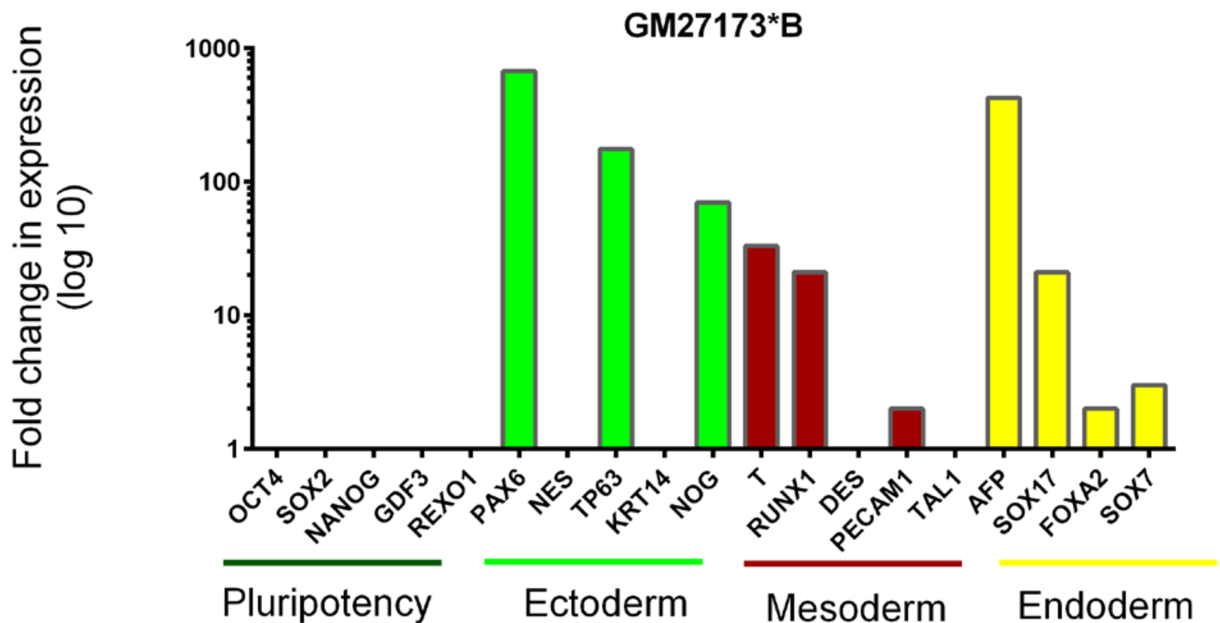
Differentiation Potential

Cells are differentiated by embryoid body (EB) formation to assess pluripotency. RNA is extracted and gene expression is measured by quantitative RT-PCR. Ct values are adjusted to the endogenous housekeeping gene GAPDH. Relative gene expression is shown as the fold difference in expression compared to undifferentiated cells. Expression of at least one gene per germ layer should increase by 2 fold or higher.



Gene	Fold change	Gene	Fold change	Gene	Fold change	Gene	Fold change
OCT4	0	PAX6	674	T	33	AFP	425
SOX2	0	NES	1	RUNX1	21	SOX17	21
NANOG	0	TP63	176	DES	0	FOXA2	2
GDF3	0	KRT14	1	PECAM1	2	SOX7	3
REXO1	0	NOG	70	TAL1	1		

Figure 4. Fold change in expression of pluripotency genes and tri-lineage specific genes

Note: Negative values are set as 0. Calculations are performed using the $2^{-\Delta\Delta CT}$ method. (*Livak KJ, Schmittgen TD. Methods. 2001 Dec;25(4):402-8.PMID:11846609)*

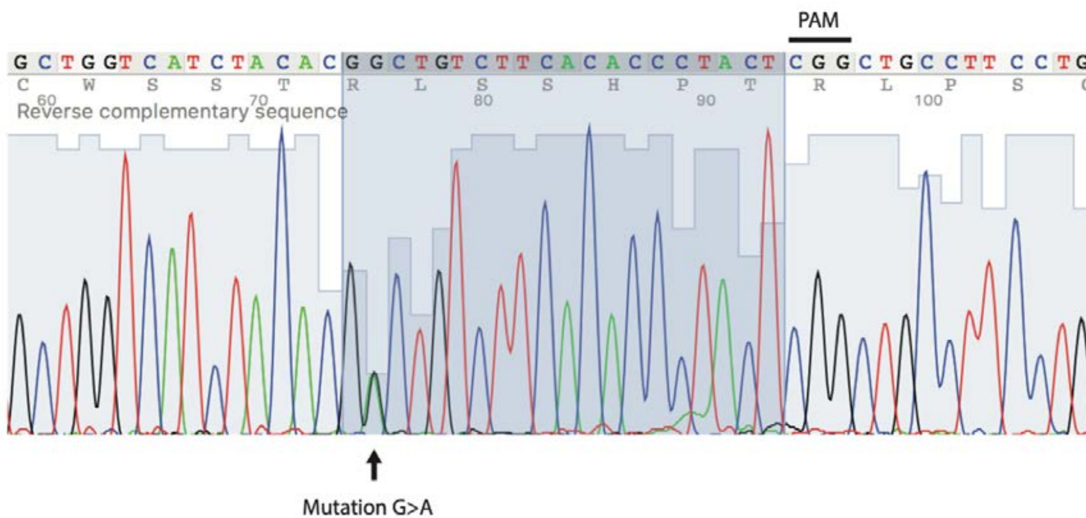
Sequence Verification

The presence of the *KCNH2* c.1264G>A (p.A422T) missense mutation in the patient-derived line (GM25305) was confirmed by Sanger sequencing of exon 6 of the *KCNH2* gene. The corrected CRISPR-Cas9 gene-edited mutation was also confirmed by Sanger sequencing. A resultant silent mutation (*KCNH2* c.1278C>G) was also detected. The top five most likely off-target CRISPR-Cas9 cutting sites were also screened by Sanger sequencing and no off-target cutting was detected.

GM25305 – Long QT 2 (*KCNH2*)
c.1264G>A, p.A422T



GM27173 – Isogenic control for Long QT 2 (*KCNH2*)
